

Improving asset management

Mark Worsfold, Head of Asset Strategy 25 November 2010

Agenda

Objective

What assets and investment types

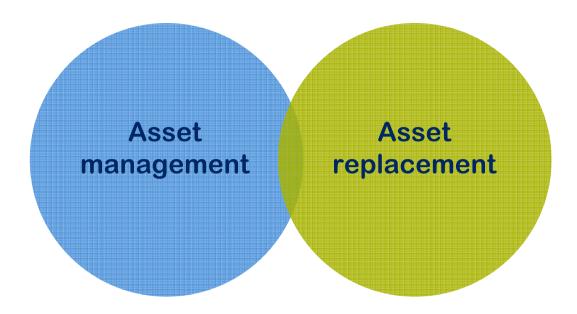

Asset management frameworks

Assessing investment need

Measuring outcomes - Serviceability

Conclusions

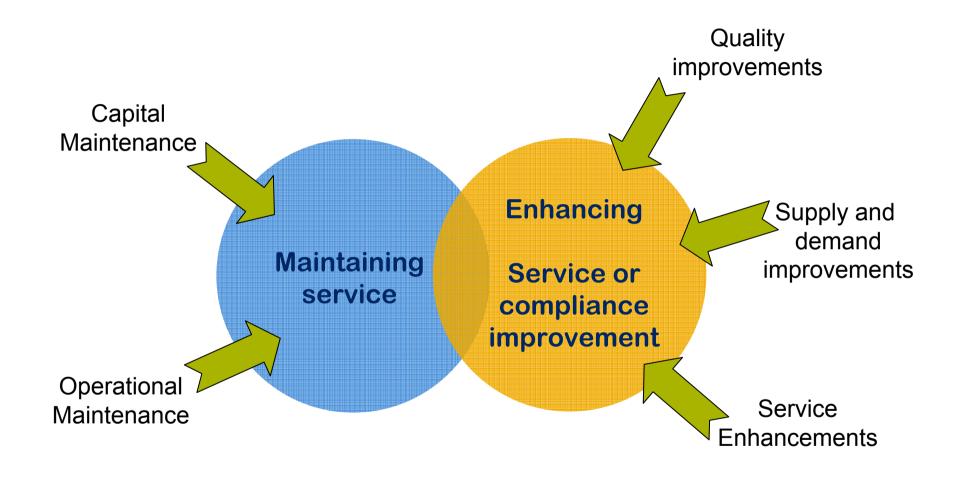

What kind of plan?

Economic and efficient

'Maintain the flow of services to customers'

Investment types?

AMP5 programme – capital maintenance

Capital maintenance – industry total (gross and pre-efficiency)

Are we already at the sustainable level of Capital Maintenance?

FD 09 Capital Maintenance – 50% real increase since AMP3

Water ! Waste water

2010 price base

| Water non-infrastructure | | |
|--------------------------|-----------|-----------------------|
| GMEAV | 2010 - 15 | uplift over 2000 - 05 |
| £ 32 bn | £ 3.7 bn | 43% |

| Sewerage non-infrastructure | | |
|-----------------------------|-----------|-----------------------|
| GMEAV | 2010 - 15 | uplift over 2000 - 05 |
| £ 42 bn | £ 4.8 bn | 43% |

Above ground

Below ground

| Water infrastructure | | |
|----------------------|-----------|-----------------------|
| GMEAV | 2010 - 15 | uplift over 2000 - 05 |
| £ 100 bn | £ 3.3 bn | 76% |

| Total Capital Maintenance | | |
|---------------------------|-----------|-----------------------|
| GMEAV | 2010 - 15 | uplift over 2000 - 05 |
| £ 365 bn | £ 13.3 bn | 50% |

 Sewerage infrastructure

 GMEAV
 2010 - 15
 uplift over 2000 - 05

 £ 191 bn
 £ 1.5 bn
 45%

£15bn spent over last 20 years

Efficiencies delivered v efficiency challenge – industry

Evolution of Asset Management

The evolution of Asset Management

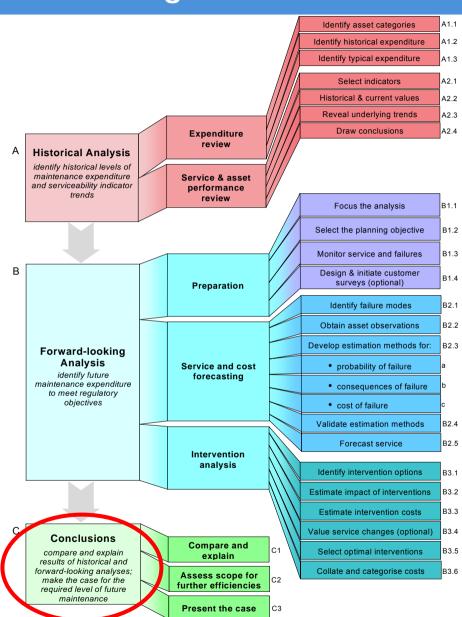

UKWIR's Capital Maintenance Planning Common Framework

A. Historical look

B. Forward look – risk based

C. Conclusions

www.ukwir.org Capital maintenance planning: a common framework Ref: 02/RG/05/3 ISBN 1-84057 265 5

FD 09 Capital Maintenance – 50% real increase since AMP3

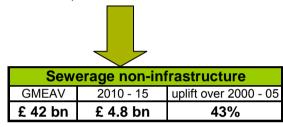

Need to maintain: Water quality improvements Leakage improvements

| Water non-infrastructure | | |
|--------------------------|-----------|-----------------------|
| GMEAV | 2010 - 15 | uplift over 2000 - 05 |
| £ 32 bn | £ 3.7 bn | 43% |

Need to maintain: Water quality improvements WFD, UWWTD

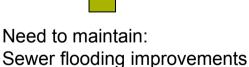

| Total Capital Maintenance | | |
|---------------------------|-----------|-----------------------|
| GMEAV | 2010 - 15 | uplift over 2000 - 05 |
| £ 365 bn | £ 13.3 bn | 50% |

| Water infrastructure | | |
|----------------------|-----------|-----------------------|
| GMEAV | 2010 - 15 | uplift over 2000 - 05 |
| £ 100 bn | £ 3.3 bn | 76% |
| | 4 | |
| | | |
| | | |

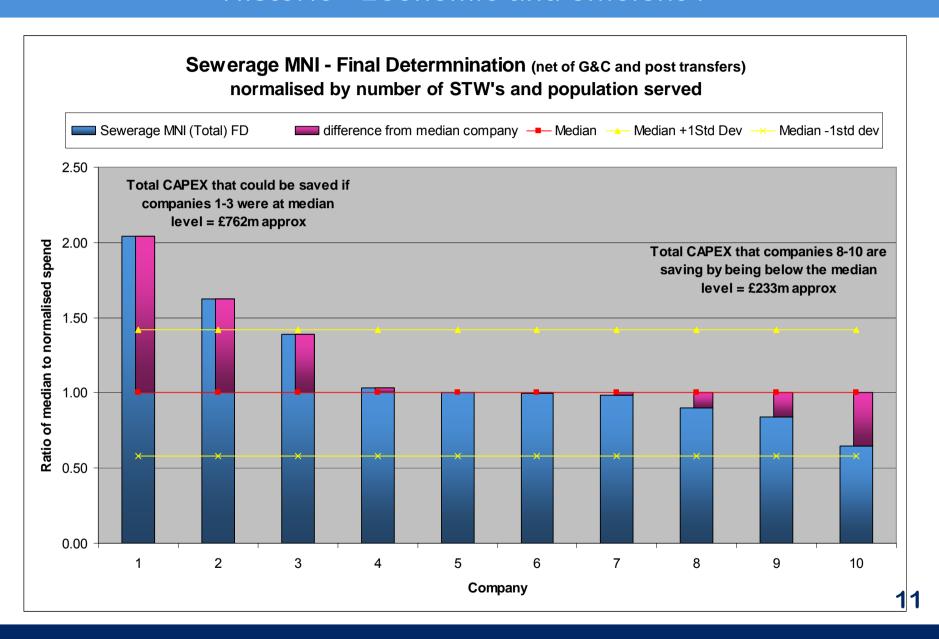

Need to maintain: Water quality improvements Metering increases

| Sewerage infrastructure | | |
|-------------------------|-----------|-----------------------|
| GMEAV | 2010 - 15 | uplift over 2000 - 05 |
| £ 191 bn | £ 1.5 bn | 45% |
| | | |

Historic - Economic and efficient?

The key ingredient?

Probability and consequence of failure

"Maintain the flow of service to customers"

Capital Maintenance - evidence base

Demonstrate the need

Understand the problem

Quantified impact, risk, probability and consequence

Solution engineering and options appraisal

Cost-benefit assessment

Programme assessment – most cost-beneficial scheme?

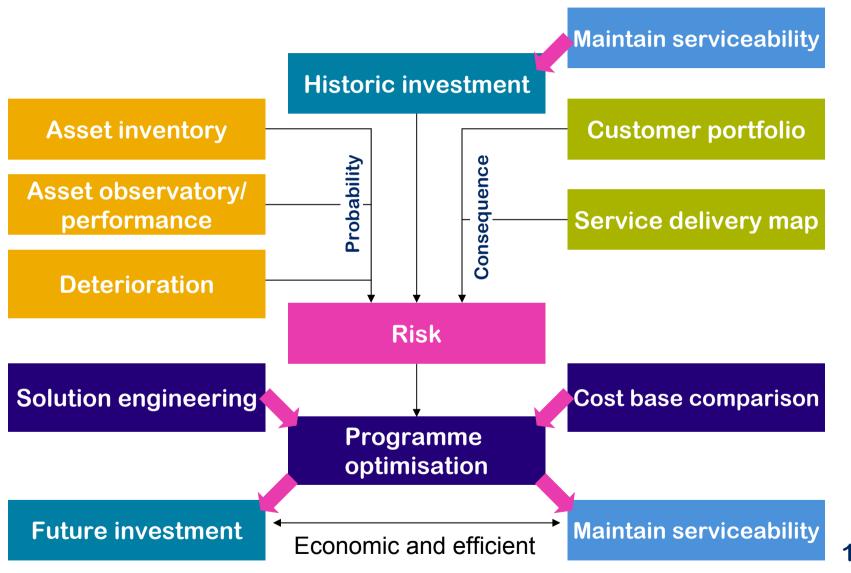

Long term perspective – why different from the past?

How will it be measured?

Service or environmental improvements

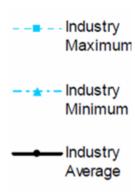

Overall impact and contribution to serviceability and enhanced service targets

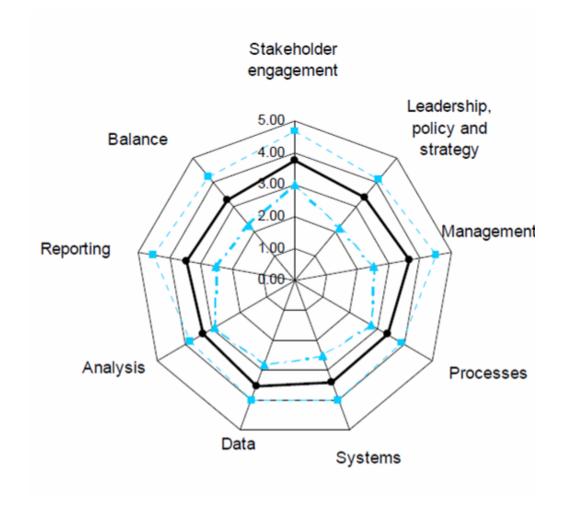

Model of business planning processes

Asset management assessment

Water infrastructure

PR09/37 contains a full description and data

Outcomes: Assessing serviceability

MD212:

"Achieving stable serviceability is a required regulatory output for all companies..."

"We have established financial mechanisms at periodic reviews to take account of any failure to deliver regulatory outputs..."

"The shortfall process ensures that customers are not required to pay for outputs that have not been delivered by companies..."

RD15/06:

Process for assessing serviceability
Defined a basket of indicator measures
Our process when serviceability is less than stable

What are serviceability measures?

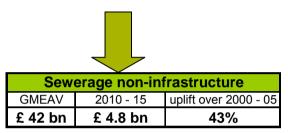

Treatment works coliforms
Service reservoir coliforms
Turbidity
Enforcements
Unplanned maintenance jobs

| Water non-infrastructure | | |
|--------------------------|-----------|-----------------------|
| GMEAV | 2010 - 15 | uplift over 2000 - 05 |
| £ 32 bn | £ 3.7 bn | 43% |

Treatment works compliance %
Population equivalent compliance %
Unplanned maintenance jobs

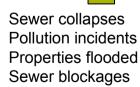

| Total Capital Maintenance | | |
|---------------------------|-----------|-----------------------|
| GMEAV | 2010 - 15 | uplift over 2000 - 05 |
| £ 365 bn | £ 13.3 bn | 50% |

| Water infrastructure | | |
|----------------------|-----------|-----------------------|
| GMEAV | 2010 - 15 | uplift over 2000 - 05 |
| £ 100 bn | £ 3.3 bn | 76% |
| | | |

Burst mains
Interruptions to supply
Turbidity, Iron and Manganese compliance
Pressure
Discolouration contacts

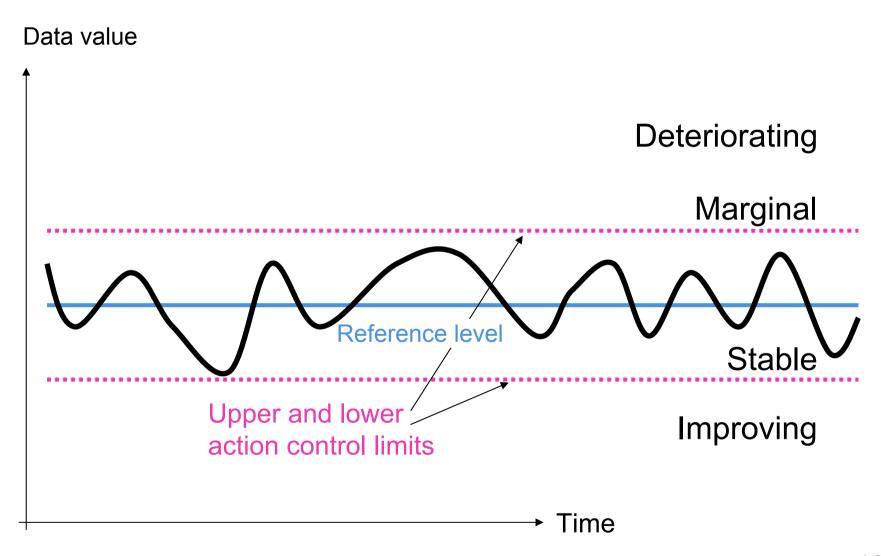

| Sewerage infrastructure | | |
|-------------------------|-----------|-----------------------|
| GMEAV | 2010 - 15 | uplift over 2000 - 05 |
| £ 191 bn | £ 1.5 bn | 45% |
| | | |

Equipment failures

Measuring serviceability

Serviceability in action

| | | JR | 04 | | JR07 | | | | |
|---------------|-------|-----------|----------|-----------|-------|-----------|----------|-----------|--|
| | Water | | Sewerage | | Water | | Sewerage | | |
| | Infra | Non-Infra | Infra | Non-Infra | Infra | Non-Infra | Infra | Non-Infra | |
| Improving | 3 | 4 | | | 3 | 1 | | | |
| Stable | 14 | 17 | 6 | 5 | 12 | 21 | 4 | 5 | |

| | Infra | Non-Infra | Infra | Non-Infra | Infra | Non-Infra | Infra | Non-Infra |
| Improving | 2 | 1 | | | | 2 | | |
| Stable | 19 | 21 | 8 | 8 | 20 | 16 | 9 | 9 |
| Marginal | 1 | | 2 | 2 | 1 | 3 | 1 | 1 |
| Deteriorating | | | | | | | | |

Shortfall adjustments for two companies with 'marginal' serviceability assessments (Veolia Central for water infrastructure and Dŵr Cymru for water non-infrastructure)

PR09/38 contains a full description and data

Conclusions

Development of asset management over 20 years

Clear objectives:

"Maintain the flow of services to customers"

"Economic and efficient delivery"

Many tools in place;

Comparative assessments – historic and cost base Asset Management Framework – risk based Asset deterioration modelling Asset Management Assessments Measuring outcomes – serviceability Incentives and cost recovery mechanisms

Allow the companies to out-perform and deliver.

Questions and answers
